SUMMARY

Computer Engineering undergraduate skilled in programming, networking fundamentals, and cybersecurity concepts. Interested in gaining deeper experience in real-world cyber threat analysis and security projects.

WORK EXPERIENCE

Intern at Veena Infotech (Veena Group) — Mumbai

June 2025 – August 2025

- Completed a 2-month backend development internship using PHP, HTML, CSS, and JavaScript, contributing to the Society Websites and Veena Management System (Security & Maintenance module).
- Worked on the Veena Estate Consultants Project, gaining hands-on exposure to web security considerations, system stability, maintenance workflows, and backend logic.

Head of Tech Department at MUN Society, NMIMS MPSTME

2024-2025

- Led development and maintenance of websites and backend workflows using Astro.js, HTML, CSS, JavaScript, including QR-based delegate systems for MumbaiMUN.
- Managed technical planning, documentation, version control, and mentored team members for smooth event execution.

Tech Executive at Maarg, Mumbai (Volunteer)

2024-present

- Assisted with frontend development and ideation for Maarg initiatives, contributing to website updates and digital support for volunteering activities.

EDUCATION

B.Tech in Computer Engineering

NMIMS MPSTME — Expected 2027

GPA (Sem 5): 3.68 / 4.0

HSC (Science) – Pace Junior Science College – 64.8%

2023

SSC – Loreto Convent School – 92%

2021

SKILLS AND CERTIFICATIONS

Certifications

- Google Cybersecurity (Coursera), CCNA (pursuing), Introduction to CIP (OPSWAT), Full Stack Development (NMIMS)

Technical Skills

- Programming: Python, C++, JavaScript, SQL, R, Java
- Web: HTML/CSS, Tailwind CSS, React.js, Astro.js
- AI / ML: Applied basics of machine learning, exposure to CNN-based image models, data preprocessing using Python
- Cybersecurity & Networking: OSINT, Linux, hands-on labs (Hack The Box), networking fundamentals (TCP/IP, HTTP, DNS), OWASP Top 10

PROJECTS AND RESEARCH WORK

• ML Based Intrusion Detection System

Built a two-stage XGBoost IDS for real-time attack detection and classification using CICIDS2017. Implemented threshold-based alerting to reduce false positives and improve detection accuracy.

• Honeypot-Based Threat Intelligence System

Deployed a Cowrie SSH honeypot on AWS EC2 to capture real-world attack data.

Parsed and analyzed attacker logs (IP, credentials, commands) to extract threat intelligence (IOCs).

• CAPTCHA Recognition using Deep Learning

Developed a CNN-based model to solve 5-character CAPTCHAs using multi-output prediction.

Improved efficiency by reducing complexity through parallel character classification.

• iOS Jailbreaking Security Analysis

Analyzed iOS security architecture and common jailbreak exploit chains.

Demonstrated concepts like sandboxing, system calls, and privilege escalation using Linux.
