ANJALI PATIL

B.Tech Computer Engineering Student at NMIMS MPSTME, Mumbai, India | Aspiring Cybersecurity Analyst

anjali2005.patil@gmail.com | 7045343572 | github.com/anjalipatil15 | linkedin.com/in/anjalipatil15 | Portfolio

SUMMARY

Computer engineering student with hands-on cybersecurity experience across vulnerability assessment, network traffic analysis, and threat intelligence — backed by CEH certification and applied lab work (Wireshark, Burp Suite, Nmap, Metasploit). Has independently built and deployed a live honeypot, an ML-based intrusion detection system, and a web vulnerability scanner, alongside a security research paper on iOS exploit chains.

SKILLS

Cybersecurity & Networking: OSINT, Linux, Hack The Box labs, TCP/IP, HTTP, DNS, OWASP Top 10, Wireshark, Burp Suite, Nmap, Metasploit, Zero Trust, ISO 27001 fundamentals

Programming: Python, C++, JavaScript, SQL, R, Java

AI / Machine Learning: TensorFlow/Keras, CNNs, XGBoost, Scikit-learn, Pandas

Web & Tools: HTML/CSS, React.js, Astro.js, Node.js, FastAPI, Git/GitHub, Docker, AWS EC2

PROJECTS

Advanced Web Application Vulnerability Scanner — *Python, FastAPI, SQLAlchemy, SQLite, Jinja2*

- Built an automated web security assessment platform covering website crawling, asset discovery, and vulnerability detection across 4 testing modules.
- Implemented automated XSS and SQL Injection detection, plus security-header and cookie-security analysis, with structured risk reporting.

Honeypot-Based Threat Intelligence System — *Cowrie, AWS EC2, Python, Linux*

- Deployed a live Cowrie SSH honeypot on AWS EC2, with automated log analysis extracting IOCs into a threat-intelligence database of attacker IPs and attack patterns.

ML-Based Intrusion Detection System — *Python, XGBoost, Scikit-learn, Pandas, CICIDS2017*

- Built a two-stage XGBoost classifier for real-time binary and multi-class network attack detection, trained on the CICIDS2017 dataset (50K+ attack samples).
- Implemented threshold-based alerting to reduce false positives in a real-time detection pipeline.

iOS Jailbreaking Security Analysis (Review Paper) — *iOS Security, Linux, System Calls, Reverse Engineering*

- Studied iOS security architecture — sandboxing, code signing, and kernel-level protections — and analyzed real-world jailbreak exploit chains.
- Built a Linux-based demo illustrating sandbox escapes, namespace isolation, and kernel-hardening concepts.

EXPERIENCE

Network Security Intern — The Cyber Ledger (Remote) **May 2026 – July 2026**

- Analyzed network traffic and security events using Wireshark and Nmap, and performed vulnerability assessments with Burp Suite and Metasploit.
- Applied malware-analysis fundamentals, Zero Trust concepts, and security best practices aligned with ISO 27001.

Backend Development Intern — Veena Infotech (Veena Group), Mumbai **June 2025 – August 2025**

- Completed a 2-month backend development internship using PHP, HTML, CSS, and JavaScript across the Society Websites and Veena Management System's Security & Maintenance module.
- Contributed to the Veena Estate Consultants project, gaining hands-on exposure to web security considerations, system stability, and backend debugging workflows.

Head of Tech Department — MUN Society, NMIMS MPSTME **2024 – 2025**

- Led a technical team building and maintaining websites and backend workflows (Astro.js, HTML, CSS, JavaScript), including a QR-based delegate verification system used by 500+ delegates at MumbaiMUN.
- Managed technical planning, documentation, and version control, and mentored team members for smooth event execution.

Tech Executive — Maarg, Mumbai (Volunteer) **2024 – Present**

- Support frontend development, website updates, and digital infrastructure for volunteer-led community initiatives.

EDUCATION

B.Tech in Computer Engineering — NMIMS MPSTME (CGPA: 3.23/4.0, Sem 6) **Expected 2027**

HSC (Science) — Pace Junior Science College (64.8%) **2023**

SSC — Loreto Convent School (92%) **2021**

CERTIFICATIONS

Certified Ethical Hacker (CEH), EC-Council • NMIMS Summer School for Cybersecurity and Forensics • Google Cybersecurity Certificate (Coursera) • Introduction to CIP (OPSWAT Academy) • Full Stack Development (NMIMS)
